

## **NOTICE: nVent ERIFLEX Flexibar Product Line Changes**

nVent ERIFLEX Flexibar Standard to be replaced by Flexibar Advanced in 2020

Dear Valued Customer,

Iconopower and nVent ERIFLEX appreciates your business. As we strive to serve your power connection needs, we remain focused on Advanced product design. This new technology combines unique features such as low smoke, halogen-free, flame retardant (LSHFFR), and high temperature without compromising our actual product benefits. We will be transitioning to our newer and improved **nVent ERIFLEX Advanced insulation technology** for nVent ERIFLEX Flexibar product line. The new Advanced technology brings added value to you and your customers in terms of safety. Across the coming months, our current Flexibar standard (PVC) solutions will see changes detailed below.

**nVent ERIFLEX Flexibar Standard (PVC) will be obsolete by December 31, 2019.**

The transition will also affect Made-to-Order (MTO's). We will continue to work with you on your MTO's to transition them to this new and improved product range.

nVent ERIFLEX Flexibar PVC technologies will have alternative solutions using our new Advanced Technology insulation that is available today. With the Advanced product range, you continue to work with the same standard while bringing added value to your panel.

For additional details, please also **download the cross-reference list, see below**

Thank you for being an nVent ERIFLEX customer. We look forward to serving and supplying your power connection needs in the future.

Best Regards

1051 Ages Drive, Ottawa,
